CLEAR

Money and growth

Guide 3 of 3 · Revenue, payments, costs, marketing

How it earns, what it costs, how to grow it.

The two income streams, how the money reaches your bank in Pakistan, the real costs, and a 30-day launch plan.

Clear Audio Recorder · version 1.0 · 10 November 2026 · prepared for Daxator

01

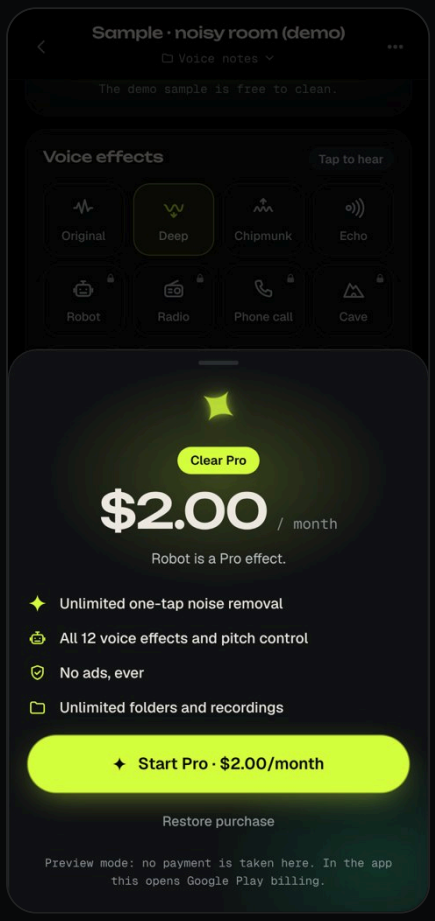

Two income streams

Clear Pro · $2 a month

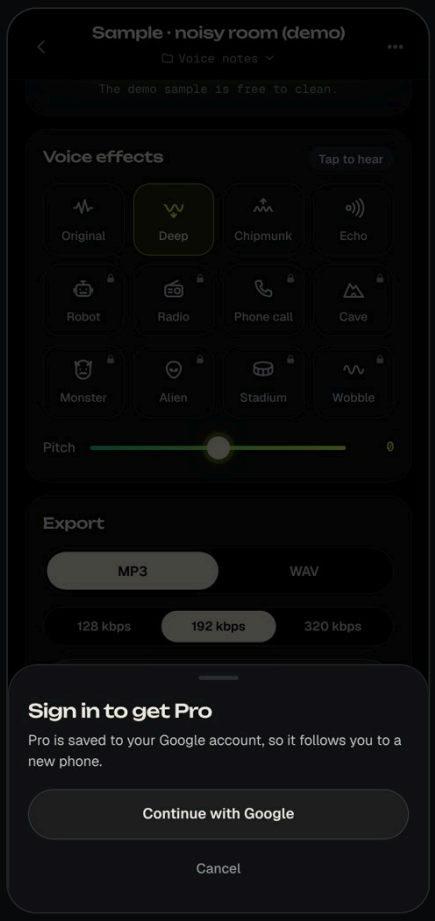

Free users get 30 seconds of cleaning. After that the Pro screen appears. Pro removes the limit, unlocks all 12 effects and removes ads. Google Play charges the user every month until they cancel.

Ads for free users

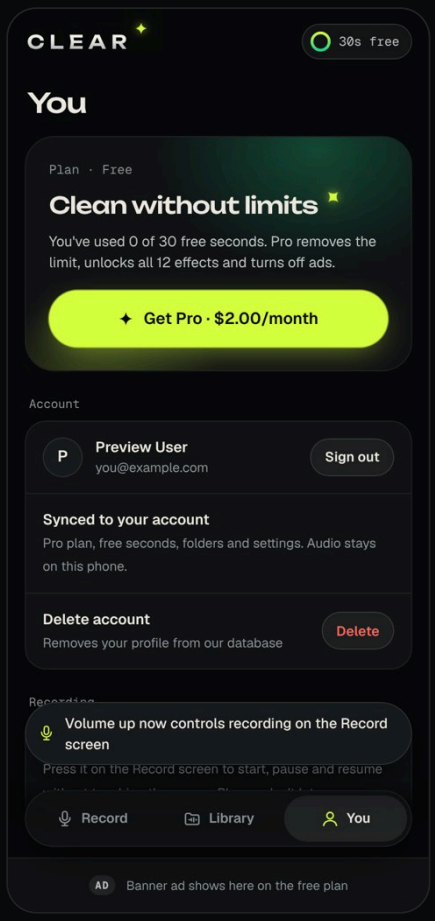

A banner at the bottom, and one full-screen ad after an export, at most every 3 minutes. You can change both from the admin panel without an update.

The Pro screen

Sign-in before buying, so Pro follows the account

Account and plan

02

What you keep from each $2

Step	Amount	Note
User pays	$2.00	Plus local sales tax where it applies, which Google collects and remits.
Google Play's share	about −$0.30	About 15% when you use Play's billing. Since 30 June 2026, in the US, UK and EEA this is a 10% service fee plus a 5% billing fee; other countries are moving to the new structure in stages.
RevenueCat	$0	Free until $2,500 a month, then 1%.
You keep	about $1.70	Before your own income tax.

$170
per month from 100 Pro users

$1,700
per month from 1,000 Pro users

$8,500
per month from 5,000 Pro users

These are arithmetic, not a forecast. How many free users become Pro depends on the app's quality and your marketing; the funnel in your admin panel shows your real rate. Ad income is on top and varies widely by country, so treat it as a bonus until you have a month of your own AdMob data.

03

How the money reaches you in Pakistan

	Google Play (subscriptions)	AdMob (ads)
Method	Wire transfer to your bank account. Pakistan is on Google's supported list.	Wire transfer to your bank account.
Minimum	US$100 balance	Shown in your AdMob account; $100 is typical.
When	Monthly, for the previous month's sales.	Around the 21st of the month after you cross the threshold.
Currency	Sent in USD. A USD account avoids a forced conversion.	Depends on your payments profile.
Before the first payout	Verify identity and add bank details (SWIFT code, IBAN) in the payments profile.	Tax info, identity check, and a PIN posted to your address (2 to 3 weeks). No PIN, no payment.
Bank charges	Your bank's incoming-wire fee, anywhere from $0 to $50.	Same.

Practical setup

Use one bank account for both. Ask your bank for its SWIFT code, whether it needs an intermediary bank for USD wires, and what it charges per incoming wire. Because each wire can carry a fixed fee, small monthly amounts lose a bigger share; that is normal in the first months. Keep the bank's payment advice for every transfer for your tax records. This is general information, not tax or legal advice; a local accountant can tell you how export-of-services income is treated.

04

What it costs

Item	Cost	When
Google Play developer account	$25	Once
Firebase, AdMob, GitHub, admin hosting	$0	Free plans cover launch scale
RevenueCat	$0	1% only above $2,500 a month
Privacy policy page	$0	Same free host as the admin panel
A domain name (optional, looks professional)	about $10 to $15	Per year
Apple Developer Program (only for iPhone)	$99	Per year
Cloud Mac build service (only for iPhone, if no Mac)	varies	Price it when you start the iOS version

$25
to launch on Android with zero marketing spend

$124+
first year if you add iPhone

Marketing budget: three levels

Level	Spend	What it buys
Organic	$0	Your own channels, short videos, Reddit and community posts, store optimisation. Start here.
Boost	$50 to $150 / month	Promote the two best-performing videos; send gifted Pro to 10 small creators.
Paid installs	$300+ / month	Google App Campaigns. Only after the funnel shows a user is worth more than an install costs.

These marketing figures are planning suggestions, not quotes. Break-even on the $25 is 15 Pro subscribers for one month.

05

Who it is for, and the one-line pitch

"Record anywhere. One tap. It sounds like a studio."

Lead with the before/after. Nobody searches for "spectral noise removal"; they search for "remove background noise from voice recording".

Audience	Their problem	Hook
Content creators, reel and podcast makers	Fan, traffic and room echo in voiceovers	"I recorded this next to a fan. Listen after one tap."
Students	Lecture recordings they cannot hear clearly	"Back-bench recording, front-row sound."
Journalists, interviewers, researchers	Noisy cafés and streets	"Clean the interview before you transcribe it."
Musicians and voice-note people	Hiss on song ideas	"Keep the idea, lose the hiss."
Fun and family	They want to play	Robot, Monster, Chipmunk effects on a kid's voice.

06

Store optimisation

- **Title:** Clear Audio Recorder: Noise Remover
- **Keywords to work into the description naturally:** voice recorder, noise remover, remove background noise, audio cleaner, voice changer, MP3 recorder, podcast recorder, lecture recorder.
- **First screenshot:** the Before/After waveform with the line "One tap. Noise gone." Most people decide from the first two images.
- **Screenshot order:** before/after → record screen → voice effects → folders → Send to PC.
- **Reviews:** reply to every review in the first month. Ask happy testers to rate after launch day, not before.
- **Localise the listing** into Spanish, Portuguese, Hindi, Indonesian and Arabic once English works. Play lets you add translations without changing the app.

07

A 30-day launch plan

Days	Do this
1 to 14 · closed test	12+ testers on the closed track. Record 10 before/after clips in real places: rickshaw, café, rooftop, next to a generator. These clips are your whole content bank.
15 · launch day	Post the best before/after on both YouTube channels, Instagram, TikTok and LinkedIn with the Play link. Announce in the admin panel. Message every tester to rate the app.
16 to 22	One short video a day. Same format every time: noisy clip, tap, clean clip, app name. Post in creator, podcast and student communities where self-promotion is allowed, with the clip, not just a link.
23 to 30	Gift Pro to 10 small creators (5k to 50k followers) from the admin panel and ask for an honest demo. Read the funnel and change one thing: free seconds, or the first screenshot.

Ten video ideas

1. "I recorded this beside a generator" before/after.
2. Street interview cleaned in one tap.
3. Phone mic vs a $100 mic after cleaning.
4. Turning a lecture recording into something you can study from.
5. My voice as Robot, Monster and Chipmunk.
6. Record with the volume button without touching the screen.
7. Send a recording to your laptop with no cable and no internet.
8. How I made a podcast intro on my phone.
9. Light vs Medium vs Strong: which one to use.
10. "This app never uploads your recordings" privacy angle.

08

Raising revenue once people are using it

- **Watch one number a week:** of the people who use all their free seconds, how many subscribe. That is the Pro screen's conversion rate.
- **Tune free seconds.** If under a third of signed-in users ever hit the limit, lower it or keep it and improve onboarding. If many hit it and few pay, the price or the Pro screen is the issue, not the limit.
- **Add a yearly plan** at $14.99 in Play Console and RevenueCat. Yearly payers churn far less. The app needs a small update to show both plans; ask Claude when you are ready.
- **Use the announcement line** for limited offers and new features.
- **Next features that justify Pro:** an on-device AI voice-isolation mode, trimming, and batch cleaning.

- **Keep ads gentle.** One full-screen ad after an export is tolerable; ads during recording would cost you ratings.
